## **Certificate of Compliance**

### LITE Guard integral lifting points

The LITE guard trench shoring system is a Proprietary shoring system Fully Certified by the original design Engineer:

Charles J Watt M.I.E. Aust C.P. Engineer.

Also, all panels have third party certification from Pitt & Sherry and Willow & Sparrow for RPEQ certification.

The Lift points on all panels (City Box, Super, Super Size, Super Size Plus & Manhole boxes) are all fully certified as part of the overall design of the system.

The lift point pin has been independently tested to destruction at 100 metric tonnes. Each lift point is rated at 4 tonnes, so a complete shield has the lifting capacity of 8 x 4.0 tonnes = 32 tonne. The heaviest LITE Guard shield, 6600 x 2400 Super Size Plus, weighs 2900kgs.

Anyone requiring further information please ask.

Regards,

David James
